QUOTATION

Commercial Quotation: AI Voice Call Centre, WhatsApp and CRM Dashboard for BJP Call Center for Public Seva

Prepared for	Prepared by
BJP Call Center for Public Seva	MORYA IT Solution & AI Solution 9834729193 | ananddesh1999@gmail.com
Quotation No. MORYA-AICC-2026-01 **Date** 19 October 2026 **Validity** 30 days from date above	**Project** AI Voice Call Centre + WhatsApp + CRM Dashboard with scheme-wise calling, script and brochure management, and live expert hand-off

1. Scope Covered by This Quotation

A custom, LLM-powered AI voice agent that calls the beneficiaries and voters supplied by BJP Call Center for Public Seva, answers their questions strictly from approved scripts and brochures, and reports every call to a live CRM dashboard. The system has four connected parts sharing one AI brain, one knowledge base and one database:

Module	What it does
Module 1: Voice Call Centre	Outbound calling to the supplied list (queue, retry logic, voicemail detection) and inbound call handling. Hindi, Marathi and English speech. Barge-in detection. DLT registered, TRAI/DND compliant calling route with AI and recording disclosure at the start of every call.
Module 2: Scripts, Brochures and Schemes	A separate dashboard section where the admin writes or uploads the call script for each scheme and language. The bot speaks according to the live script, with the caller's name, booth and scheme filled in. New scripts can be added every 15 to 20 days (or on any schedule) with valid-from and valid-to dates, a test call and version history. Brochures and scheme documents become the knowledge the bot uses for questions outside the script. Scheme-wise calling: the bot detects the scheme and explains eligibility, documents to carry, booth or centre details and last dates. Aadhaar is never read out; only the last four digits are confirmed.
Module 3: Live Expert Hand-off and CRM Dashboard	One human expert is mapped to each scheme. If the bot cannot answer, or the caller asks for a person, the call is transferred to that expert with a short summary. The dashboard shows all calls, recordings, transcripts, outcomes, live call monitor with listen-in / take-over, reports and exports.
Module 4: WhatsApp Integration	Official WhatsApp Business API through an approved provider. After a call, the bot sends the caller a WhatsApp message with the booth location, documents to carry and the scheme brochure. Callers can also message the number and chat with the same AI, using the same scripts and knowledge base, with hand-off to the scheme expert. Every WhatsApp conversation appears in the same CRM record as the calls.

2. One-Time Development Cost

Item	Amount (INR)
Discovery, requirement finalization and knowledge base setup	Rs. 35,000
Voice call agent core: Twilio/Exotel dialer, inbound line, speech-to-text / text-to-speech in 3 languages, barge-in detection	Rs. 1,10,000
Script editor and script-driven speech: write or upload scripts per scheme and language, caller-detail variables, voice settings, versioning, validity dates, test call, plus brochure indexing	Rs. 80,000
Scheme module: scheme-wise call flows, eligibility and document answers, masked Aadhaar confirmation, booth / centre information	Rs. 55,000
Compliance and live-handoff module: DLT/TRAI/DND routing, consent disclosure, call queue and retry manager, scheme-wise expert transfer	Rs. 40,000
CRM and call-monitor dashboard: contact upload, call logs, recording playback, transcripts, outcomes, reports, live monitor	Rs. 75,000
WhatsApp Business API integration: post-call messages with brochure and booth details, two-way AI chat on the same scripts and knowledge base, expert hand-off, CRM sync, template approval support	Rs. 65,000
Testing, tuning, security review and demo preparation	Rs. 40,000
Total One-Time Development Cost	**Rs. 5,00,000**

Covers design, custom LLM agent build, integration, testing and live demo delivery by MORYA IT Solution & AI Solution.

3. Monthly Recurring Cost (Running the System)

Item	Amount (INR)	Nature
AI voice usage: speech-to-text, Claude AI, text-to-speech and telephony per-minute charges (baseline: up to 5,000 calls per month, approx. 6,400 connected minutes)	Rs. 19,000	Pass-through
WhatsApp Business API: provider fee and Meta message charges (billed at actuals; baseline volume)	Rs. 6,000	Pass-through
Cloud hosting, vector database, backups and call-recording storage	Rs. 6,000	Pass-through
Maintenance, monitoring, support and call QA sampling, including script and brochure refresh (up to 2 cycles per month)	Rs. 35,000	Professional fee
Total Monthly Cost (baseline)	**Rs. 66,000**	

Pass-through items are billed at actuals. Voice usage depends on how many calls connect and how long they last. The Rs. 35,000 support fee is fixed. Estimated voice usage at other volumes (the rate per connected minute falls with volume; assumes 75% of calls connect and about 1.7 minutes per call; the total includes Rs. 47,000 of hosting, WhatsApp and support fee):

Calls per month	Connected minutes	Rate per minute	Est. voice usage	Est. total per month
5,000	approx. 6,400	Rs. 3.0	approx. Rs. 19,000	approx. Rs. 66,000
10,000	approx. 12,800	Rs. 3.0	approx. Rs. 38,000	approx. Rs. 85,000
25,000	approx. 31,900	Rs. 2.6	approx. Rs. 83,000	approx. Rs. 1,30,000
50,000	approx. 63,800	Rs. 2.3	approx. Rs. 1,47,000	approx. Rs. 1,94,000

4. Market Benchmark (Why This Investment Is Fair)

- Single-language AI chatbots with a knowledge base typically cost Rs. 3,00,000 to 8,00,000 in India, and complex builds with multiple languages, human hand-off and an analytics dashboard cost Rs. 8,00,000 to 15,00,000 (Indian market guides, 2026).
- Multi-channel AI agents that include voice are commonly priced at Rs. 6,00,000 to 15,00,000 one-time, with monthly operations of Rs. 40,000 to Rs. 1,50,000.
- Voice AI usage in India is reported at roughly Rs. 1.75 to 5.5 per minute depending on volume, against Rs. 7 to 8 per minute for human call-centre operations. Platform set-up alone is reported at Rs. 1,00,000 to 5,00,000.
- This quotation covers two channels (voice and WhatsApp) with a full CRM, script manager, scheme module and live expert hand-off, and is positioned in the lower-middle of the market range.

Sources: Indian AI vendor pricing guides and industry reports published in 2026. Figures are indicative.

5. What is Not Included in This Quotation

- Website chat widget and Instagram / Messenger channels (can be added; quoted separately).
- Meta business verification fees, if any, and WhatsApp message charges beyond the baseline (billed at actuals).
- DLT registration and telecom operator fees, charged at actuals by the operator or provider and not a MORYA fee.
- Election-related approvals, including pre-certification of voice messages or phone canvassing by the Election Commission authorities (MCMC), which is the client's responsibility.
- Contact data and lawful consent for the numbers supplied, which the client provides. Languages beyond Hindi, Marathi and English.
- Multi-project support beyond this project, quoted separately.

6. Payment Terms

- 40% advance (Rs. 2,00,000) to begin work
- 40% (Rs. 2,00,000) on demo delivery / sign-off
- 20% (Rs. 1,00,000) on go-live
- Monthly fee billed in advance, starting from go-live date

7. Timeline

- Dashboard, script manager and bot demo on a test line: approx. 4 to 5 weeks from kickoff
- Scheme module and expert hand-off tested end to end: approx. 3 weeks after demo sign-off
- WhatsApp integration live and tested: approx. 3 weeks after demo sign-off, running alongside the scheme module (depends on Meta business verification and template approval)
- Production go-live including DLT and carrier provisioning: approx. 8 to 10 weeks total from kickoff

Calling-route approvals depend on the carrier and telecom provider and are outside our control, which is the main factor in the go-live date.

8. Notes

- Prices exclude applicable GST.
- Scope changes beyond what is listed above will be quoted separately.
- Full Aadhaar numbers are not stored or read out by the system. Call recordings are stored encrypted, hosted in India.
- Quotation valid for 30 days from the date above.
